S.A.M. SpA

CONSTRUCTION COMPANY

Offices and plants:

Cherasco - Italy - Frazione Cappellazzo - Via del Lavoro, 1 - Tel. e Fax 0172 495802

Alba - Italy - Frazione Mussotto - Strada Riondello 21

Website: www.samcostruzioni.com - E-mail: info@samcostruzioni.com

General Data:

- Registered office: Monforte d'Alba (CN) - Italy -
- VAT code: IT00166530048
- Certification SOA CQOP no. 47233/10/00 issued on 11/05/2017
- Certifications UNI EN ISO 9001
- EC certifications for bituminous mixtures (EN 13108) and for aggregates (EN 13242)
- Licensee for Italy for LEA-Co half-warm-mix technology

Our history

S.A.M. SpA was founded in 1952 in Monforte d'Alba (CN) where it began working in the road building field.

In 1970 the company moved to Alba and extended its activity in road paving with the acquisition of a production plant for asphalt conglomerates.

Over the years, the company has further expanded with investments in plants, equipment and quarries exploitation.

In 2012 the company headquarters moved in Roreto di Cherasco (CN) where a new plant for the production of bituminous conglomerates has been started.

This plant, equipped with the best available technologies, is located in an area of high strategic value and allows S.A.M. SpA to strengthen its presence and operations capability.

Over the years the company has extended its activity to building sector: civil and industrial constructions, school buildings, retirement homes construction.

Our values

Founding values of S.A.M. SpA are quality, reliability, safety and professionalism in relationship with the client, but also with workers and external partners.

Our company constantly invests in staff training to develop its professional quality and skills.

The Technical Office, in particular, can provide a high level support in all phases of the realization process in order to achieve a high quality service: starting from the design of the project to the completion of the work.

Our skills

Road construction

- Construction and maintenance works on roads and highways
- Urban infrastructures in civil and industrial projects
- Special road surfaces and runways
- Recycling of construction materials
- Water works
- Environmental reclamation
- Demolition works
- Excavation and earthworks

Building construction

- Construction and maintenance of civil and industrial buildings
- Reinforced concrete works
- Integrated energy redevelopment
- School buildings
- Renovations
- Seismic requalification
- Wooden building construction

Road construction

Our 65 years experience is a reason of pride for S.A.M. SpA and put the company among the best competitors on the local road works market.

SAM SpA operates in the North-West of Italy, both in the public and private sectors, and among our main clients there are:

- **Piedmont and Liguria Department of ANAS SpA (National Agency for road building and maintenance)**
- **Provinces of Turin, Cuneo, Asti, Alessandria, Savona**
- **Local Administrations**
- **Turin-Savona motorway (E717 – A6)**
- **“Autostrada dei Fiori SpA” motorway (E80 - A10)**
- **FIAT Partecipazioni Spa**
- **Rolfo SpA**
- **Gruppo Praga**
- **GEAC SpA (Cuneo-Levaldigi Airport)**
- **Ferrero Spa**
- **Miroglio Spa**
- **Diageo SpA**

Alba production site

Here, S.A.M. SpA owns a plant for the production of bituminous conglomerate with a productivity of 120 tons/h as well as a wide area for the storage of materials and equipment.

Roreto di Cherasco production site

The company headquarters are located in the industrial area at the crossing of the A6 Torino-Savona and A33 Asti-Cuneo highways.

Here, a new plant for the production of bituminous conglomerates - a Marini (Fayat Group) Top Tower 3000 model – was installed few years ago.

Equipped with the best available technologies and with an hourly output of 200 ton/h, the plant allows the production of any bituminous mixture, with hot and cold technology and with the possibility of recycling milled materials.

Furthermore, thanks to the partnership with LEA®-CO France, S.A.M. SpA is the first company on the Italian market to produce and sell, with a license for Italy, the half-warm asphalt mixture with EBE (Enrobé a Basse Energie – low energy mix) technology. This is an innovative system for the production of asphalt concrete at low temperatures (90 – 95°C) with the introduction of wet sand and foaming process, which guarantees high performance products that are at the same time cutting edge products in environmental protection.

Moreover, using “albino bitumen”, conveyed into a dedicated line, the plant can produce transparent and colored conglomerates to satisfy any design requirement.

A production line for the crushing and the screening of milled waste, to be re-used in production, efficiently completes the equipment of the plant.

Within the site there is also an area for storage and salvage of non-dangerous waste from excavation and

demolition works.

Lastly, here we own a 160 ton/h CIFA plant for the production of cement mixtures using materials from quarries or reclaimed materials.

With this settlement, S.A.M. SpA proposes itself as an innovative competitor in the construction market adopting a new concept of sustainability in the production of road materials through:

- ♦ *The adoption of the best technologies*
- ♦ *The production of energy-saving materials*
- ♦ *The high rate in re-using recycled materials*
- ♦ *The reduction of atmospheric emissions*
- ♦ *The exploitation of demolition waste*

For eco-friendly roads

Chromasphalt coloured asphalt

S.A.M. Spa produces, thanks to the technology installed in the Roreto di Cherasco plant, a wide range of colored asphalts suitable for a great variety of requirements.

Our colored asphalts have been developed with the aim of adapting asphalt conglomerates to modern needs in architectural designs and for environmental sustainability.

They are an optimal solution in any case where a good visual impact is required (better than with traditional black asphalts) and a greater harmonization with the surrounding landscape is needed.

Using albino asphalt (obtained through a decoloration process), conglomerates can be produced so as to enhance the natural color of the aggregates, or, by adding specific pigments, to obtain the desired colors.

Dogliani (CN): remake of Piazza d'Armi square

Savona: urban renovation of Zinola esplanade

Our colored asphalts are particularly suitable for:

- *Squares, car parks, private roads and driveways*
- *Pedestrian areas*
- *Cycle paths, reserved lanes, sidewalks, renovations in old towns areas*
- *Park driveways and golf pathways*

Our products are an effective substitute to stone paving, in terms of cost advantage and of the higher speed in execution, while they are an ultimate better option to concrete interlocking pavers, since they require a lot less time to be executed, they have a better aesthetic result and a greater performance in terms of driving conditions (for cars, but also for forklifts etc).

Building construction

Thanks to its experience and to investments in equipment, but especially in management and operational staff, S.A.M. SpA can carry out any type of construction work, from greenfield projects to renovations.

The company operates in several fields of building:

- *Civil buildings*
- *Industrial building*
- *School buildings*
- *Retirement homes construction.*

The use of modern and updated techniques, the constant attention to details in every phase of construction and an accurate operational control, allow the Company to carry out projects with high quality standards and thorough compliance with contractual times.

Our technical staff can face every technical problem with rapidity and competence, solving unexpected and variant items with professionalism and promptness.

S.A.M. SpA deals with the construction process with the care of craftsmanship but with the organizational structure of an industrial enterprise, always aiming to deliver every project to the quality expected by clients, through the experience and the passion of its staff.

Barolo (CN): demolition and reconstruction of Mascarello wine producer cellar

Asti Municipality: maintenance and redevelopment of primary school

C.S.E.A. - Cuneo Ecology and Environment Services: demolition and rebuilding of the warehouse at the Revello collection platform

*Casa Serena ONLUS
Monteu Roero (CN):
retirement home renovation
and expansion*

*Prunetto Municipality (CN):
primary school anti-seismic adaptation*

Some works performed in recent years

Dimar S.p.A. - Cherasco (CN)

Infrastructural works and access links with public roads for the new shopping mall in Cuneo

Canale Municipality (CN)

Building of barrage and overflow basin on the local river

ANAS Piedmont Dept.

Building of new access roads for the town of Montà d'Alba

Town of Torino
road maintenance

Turin –Savona motorway (E717 – A6):

Building of a new Service Station (Rio Cocchi Ovest)

Turin –Savona motorway (E717 – A6):

Enhanced antiskid paving

- **Turin –Savona motorway (E717 – A6):**
Building of a new exit and toll booth (Carmagnola)

- **GEAC S.p.A. (Cuneo Levaldigi Airport)**
Up-grading of runway and of the Bravo taxiway

- **Collini S.p.A.**
Asti - Cuneo highway – (E74 – A33) formation of road groundwork in cement mixture

Gruppo Praga - Serravalle Scrivia

Infrastructural works and access links with public roads for the new shopping mall in Santa Vittoria (CN)

Town of Saluzzo

Renovation of Cavour square
